

For Assembly Show Product Showcase

Buffalo Grove, IL—

Tohnichi, an industry leader in innovative torque products, will be showcasing their upcoming and newly released items at The Assembly Show, October 22-24th in Rosemont, IL. Visitors to Booth #1741 will see the wide selection of torque wrenches, screwdrivers, and test equipment. Tohnichi is known for its selection of error proofing hand tools that assist with avoiding possible missed or incorrect hand tightening in the assembly process.

One of these error proofing techniques include limit switches-- once the torque setting has been achieved, it will send a signal to a PLC or counter to verify the manual tightening by tracking the number of completion “clicks” from the torque wrench. Evolving from limit switches that are cabled to wireless connectivity, Tohnichi’s latest version wireless module, now has double tightening detection. This will alert the user if they try to tighten the same fastener more than once making it a higher level of error proofing. The new double tightening detection wireless module wrench Model CSPFHW will be available for purchase fall of 2019.

About Tohnichi:

Tohnichi is a premier manufacturer of industrial quality torque tools and measuring equipment. As a subsidiary of Tohnichi Mfg. Co. Ltd., Tohnichi America was established in 1984 to support sales and service in North and South America. Tohnichi first earned a reputation in the auto industry as a leader in torque innovations among the major Japanese automotive manufacturers. Tohnichi has a wide range of torque products that service varying industries including automotive, aviation, manufacturing, medical and maintenance.
